Date: Thursday, March 30, 2017 1:25:24 PM

Emily,

In 6.260 the indirect heating sources at AECI New Madrid were restricted to 10 lb SO₂/MMBtu on a three-hour average; however, in 6.261, the 10 lb SO₂/MMBtu limit was applied to the entire installation...

10 CSR 10-6.260:

(3) General Provisions.

(B) Restriction of Emission of Sulfur Dioxide from Indirect Heating Sources.

2. Indirect heating sources located in Missouri, other than in Franklin, Jefferson, St. Louis, St. Charles Counties, or City of St. Louis.

B. The following existing indirect heating sources listed in Table I shall limit their average sulfur emissions into the atmosphere to the allowable amount of sulfur dioxide per million Btus of actual heat input averaged on any consecutive three (3)-hour basis.

10 CSR 10-6.261:

(3) General Provisions.

(A) SO₂ Emission Limits. No later than January 1, 2017, owners or operators of sources and units listed in Table I of this rule must limit their SO₂ emissions as specified. As of the effective date of this rule, owners or operators of sources listed in Table II of this rule must limit their SO₂ emissions as specified.

I know you were fixing similar problems for Ameren, are you also fixing this problem for the Table II sources?

Thanks,

Alana L. Hess, PE
